THE DAY THE UNIVERSE CHANGED

The Ordnung is a set of rules for Amish, Old Order Mennonite and Conservative Mennonite living.

Ordnung is the German word for order, discipline, rule, arrangement, organization, or system.

Source: https://en.wikipedia.org/wiki/Ordnung

The Ordnung evolved gradually over the decades as the church sought to strike a delicate balance between tradition and change. Specific details of the Ordnung vary across church districts and settlements.

New mechanism for experimental features
Newly-added experimental features will now require this incantation:
no warnings "experimental::feature_name";
use feature "feature_name"; # would warn without the prev line
There is a new warnings category, called "experimental", containing warnings that the feature pragma emits when enabling experimental features.
Newly-added experimental features will also be given special warning IDs, which consist of "experimental::" followed by the name of the feature. (The plan is to extend this mechanism eventually to all warnings, to allow them to be enabled or disabled individually, and not just by category.)
By saying
no warnings "experimental::feature_name";
you are taking responsibility for any breakage that future changes to, or removal of, the feature may cause.
Since some features (like ~~ or my $_) now emit experimental warnings, and you may want to disable them in code that is also run on perls that do not recognize these warning categories, consider using the if pragma like this:
no if $] >= 5.018, warnings => "experimental::feature_name";
Existing experimental features may begin emitting these warnings, too. Please consult perlexperiment for information on which features are considered experimental.
